

Docket No. F-8064

Ser. No. 10/736,185

AMENDMENTS TO THE CLAIMS:

Please replace the claims with the claims provided in the listing below wherein status, amendments, additions and cancellations are indicated.

1.(Currently Amended) A transfer method comprising:

applying an adhesive to an upper surface of a pattern, the pattern having been formed on a transfer sheet by copying or printing, ~~the adhesive and pattern adapted such that the surface tension of the adhesive allows it to spread on the upper surface of the pattern~~ the adhesive having a surface tension such that the adhesive moves smoothly on the upper surface of the pattern, the adhesive being one of a hot-melt adhesive, water-soluble, and or alcohol soluble adhesive including acrylic pressure sensitive adhesive, polyvinyl acetate adhesive, chloroprene rubber adhesive, polyurethane resin adhesive, polyvinyl chloride adhesive, and silicon rubber adhesive; and

transferring the pattern to a substrate by applying pressure or heat, wherein one or more patterns can be transferred on a substrate and wherein the patterns are adapted to be able to overlay on one another on the substrate.

2.(Currently Amended) The transfer method according to claim 1 wherein the adhesive is one of a water-soluble and or alcohol soluble adhesive including

Docket No. F-8064

Ser. No. 10/736,185

acrylic pressure sensitive adhesive, polyvinyl acetate adhesive, chloroprene rubber adhesive, polyurethane resin adhesive, polyvinyl chloride adhesive, and silicon rubber adhesive, wherein the adhesive is adapted to be capable of being colored by paint.

3.(Previously Presented) A transfer method according to claim 1 or 2, further comprising:

forming one or more coating layers on the transferred patterns after the transfer step is carried out, wherein

the one or more coating layers are one of a transparent and a colored coating liquid.

4.(Previously Presented) A transfer method according to Claim 1 or 2, wherein the transfer sheet comprises:

one of a copy sheet and print sheet, the print sheet and copy sheet comprising a removal sheet as a remover layer and a liner sheet; and

a pattern for transfer which is copied or printed on the removal sheet of one of the copy sheet and the print sheet.

Docket No. F-8064

Ser. No. 10/736,185

5.(Previously Presented) A transfer method according to claim 4, wherein the remover layer of the transfer sheet is formed by applying a remover to the liner sheet.

6.(Cancelled).

7.(Previously Presented) A transfer method comprising:

forming a transfer sheet with a pattern, the pattern being formed by one of copying and printing on a remover layer, the remover layer being on a liner sheet; and

transferring the pattern, wherein one or more patterns can be transferred on a substrate and wherein the patterns are adapted to be able to overlay on one another on the substrate, and wherein the transferring comprises one of adhering with transparent or semi-transparent adhesives by using pressure, and adhering with a hot-melt resin by adding the heat of an iron.

8. (Previously Presented) A transfer method according to claim 7, wherein the remover layer of the transfer sheet is formed by applying a remover to the liner sheet.

Docket No. F-8064

Ser. No. 10/736,185

9. (Cancelled).

10.(Currently Amended) A transfer method comprising:

forming a transfer sheet with a pattern formed by copying or printing the pattern on a remover layer of the transfer sheet, the transfer sheet comprising a remover layer on a liner sheet; and

applying an adhesive to one of an upper surface of a pattern for transfer formed on a transfer sheet and or a transfer surface of a substrate, the adhesive for transfer being one of an acrylic pressure sensitive adhesive, polyvinyl acetate adhesive, chloroprene rubber adhesive, polyurethane resin adhesive, polyvinyl chloride adhesive and silicon rubber adhesive, the adhesive having flexibility and staining properties; and

transferring one or more patterns onto a substrate, the patterns being adapted to be able to overlay on one another on the substrate, and wherein the pattern with the adhesive is applied onto the substrate or the pattern without adhesive is applied onto the portion of the substrate having adhesive.

11.(Previously Presented) A transfer method according to claim 10. wherein the remover layer of the transfer sheet is formed by applying a remover to the liner sheet.

Docket No. F-8064

Scr. No. 10/736,185

12.(Cancelled).

13. (New) A transfer method comprising:

applying an adhesive with a brush to an upper surface of a pattern, the pattern having been formed on a transfer sheet by copying or printing; and
transferring the pattern to a substrate by applying heat or pressure.

14. (New) The transfer method of claim 13, wherein the heat is applied by an iron.

15. (New) The transfer method of claim 13, wherein a surface tension of the upper surface of the pattern is larger than the surface tension of water.

16. (New) The transfer method of claim 13, wherein the adhesive moves smoothly on the upper surface of the pattern because of a surface tension of the adhesive.

17. (New) The transfer method of claim 13, wherein the transfer sheet comprises a remover layer on which the pattern is formed and the remover layer and adhesive are adapted such that the adhesive slips off the remover layer.

Docket No. F-8064

Ser. No. 10/736,185

18. (New) The transfer method of claim 13, further comprising over-transferring a pattern on another pattern.

19. (New) The transfer method of claim 13, further comprising coloring the adhesive with paint.

20. (New) The transfer method of claim 13, further comprising coloring the adhesive to be white.

21. (New) The transfer method of claim 13, further comprising forming one or more coating layers on the transferred patterns after the transfer step is carried out.

22. (New) The transfer method of claim 19 wherein said coloring of said adhesive is done by mixing the adhesive and the paint with a brush.

23. (New) The transfer method of claim 13 further comprising cutting a portion of the transfer sheet with a pair of scissors, said cutting being done before said pattern is transferred to said substrate.

Docket No. F-8064

Ser. No. 10/736,185

24. (New) The transfer method of claim 23, wherein said portion of said transfer sheet includes the pattern to be transferred.

25. (New) The transfer method of claim 21, wherein said one or more coating layers are colored.

26. (New) The transfer method of claim 13, further comprising:
over-transferring a pattern on another pattern;
coloring the adhesive to be white by mixing the adhesive and white paint with a brush;

forming with a brush one or more coating layers on the transferred patterns after the transfer step is carried out; and

cutting a portion of the transfer sheet with a pair of scissors, said cutting being done before said pattern is transferred to said substrate and said portion of said transfer sheet including the pattern to be transferred, wherein

the transfer sheet comprises a remover layer on which the pattern is formed,

the heat is applied by an iron,

the surface tension of the upper surface of the pattern is larger than the surface tension of water,

Docket No. F-8064

Ser. No. 10/736,185

said remover layer has been formed by spraying,

said copying or printing is done with a resin toner, and

said adhesive is one of acrylic pressure sensitive adhesive, polyvinyl acetate adhesive, chloroprene rubber adhesive, polyvinyl chloride adhesive, or silicon rubber adhesive.
